

Supplementary Figure S7. GSE154918 component-level and sensitivity analyses

A Component-gene directional replication

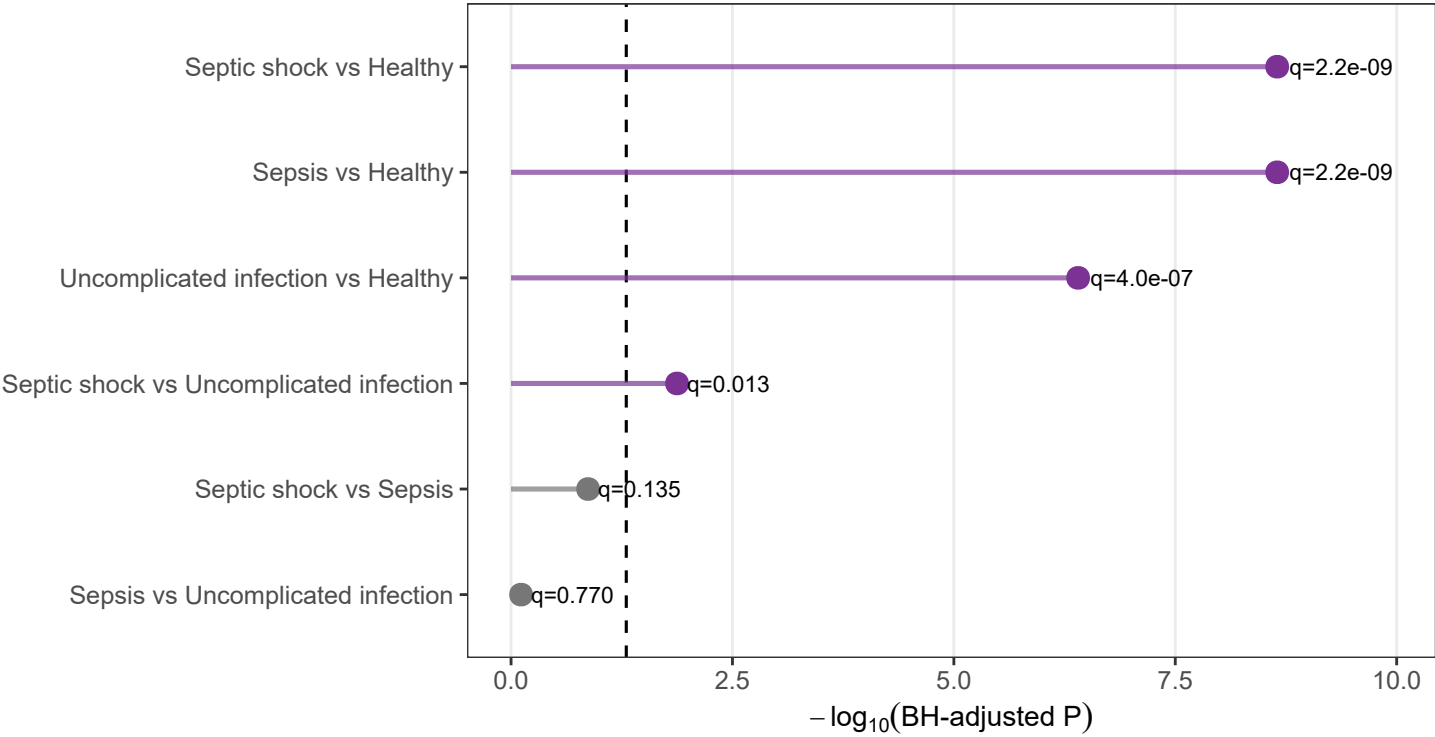

Primary comparison: sepsis/septic shock vs uncomplicated infection; 5/5 concordant, 0/5 BH-adjusted P < 0.05

* Nominal P < 0.05 ● P >= 0.05 ● DOWN component ● UP component

B Pairwise baseline-state contrasts

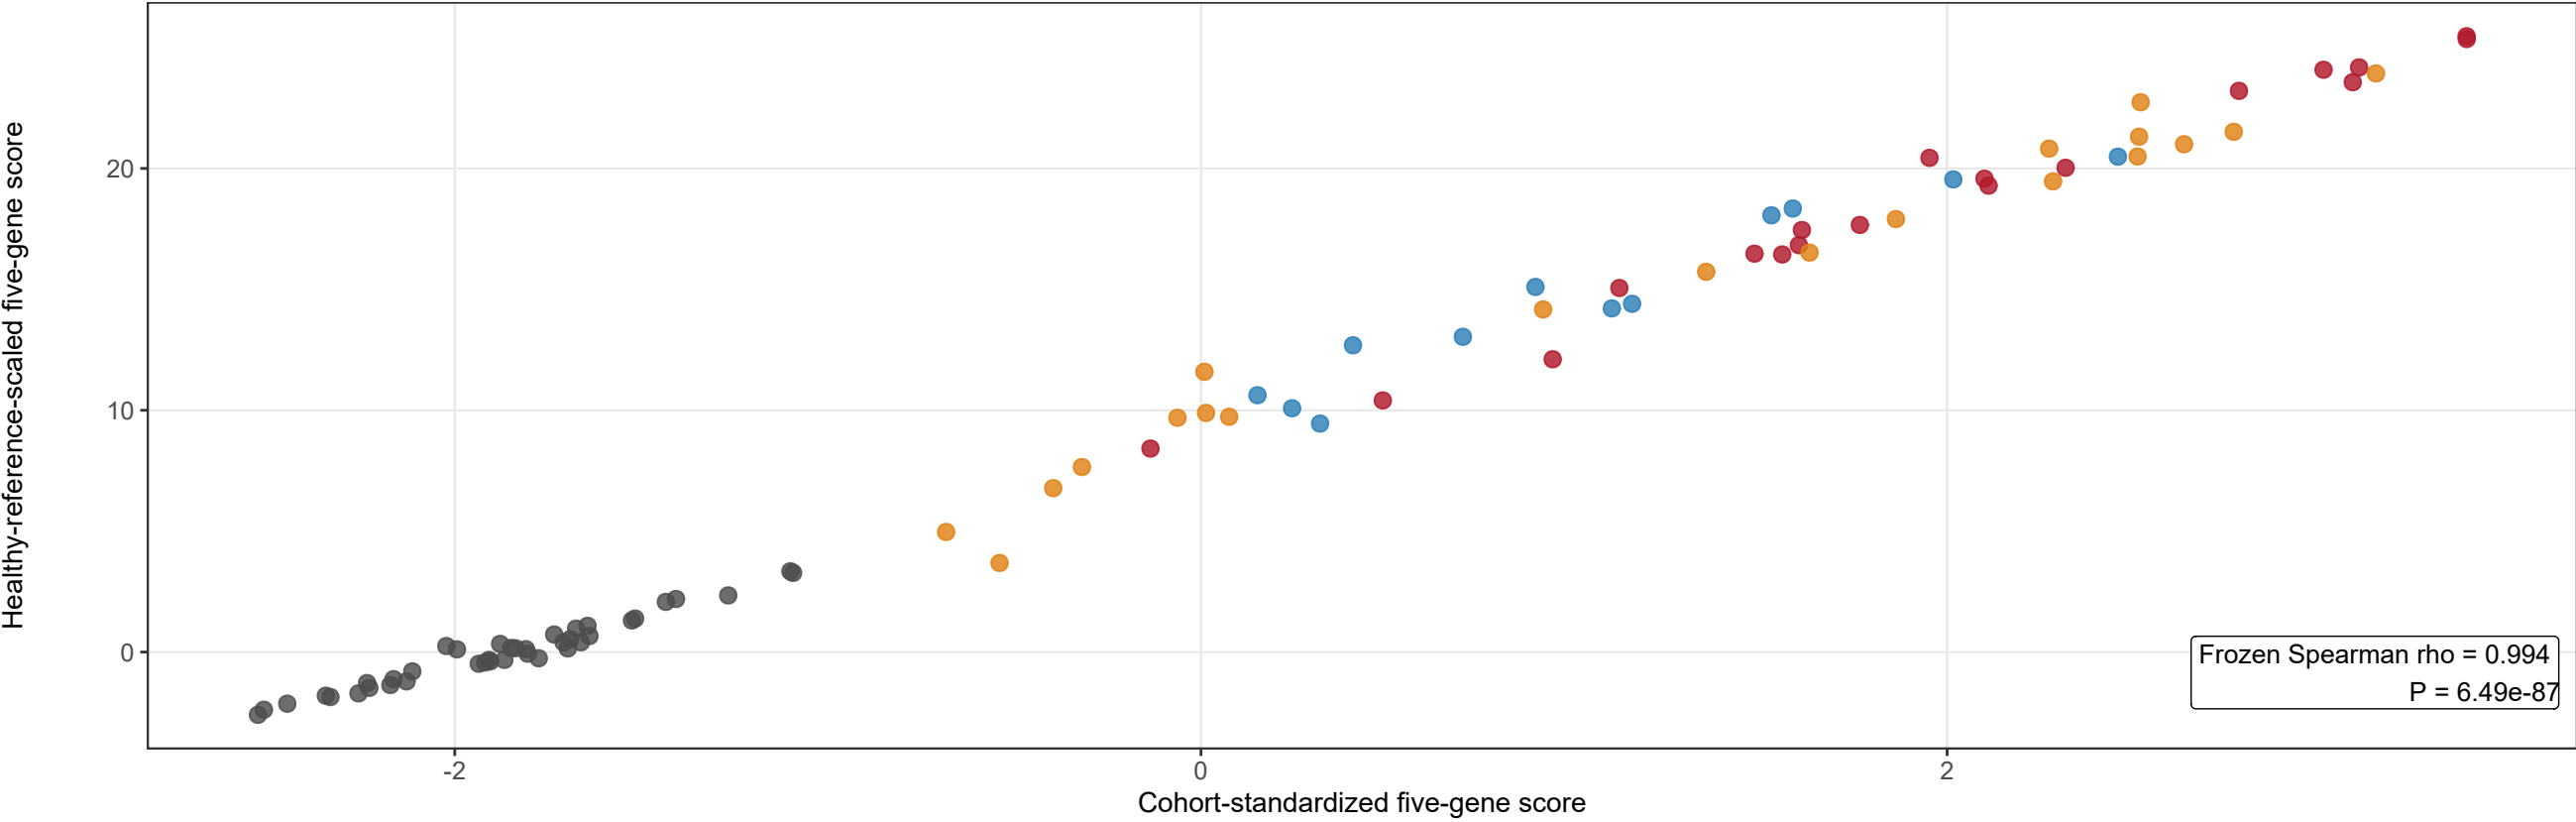

Frozen pairwise BH-adjusted P values; dashed line denotes q = 0.05

● BH q >= 0.05 ● BH q < 0.05

C Score-scaling sensitivity

Frozen sample-level scores; correlation annotation is copied from Script 141

● Healthy ● Uncomplicated infection ● Sepsis ● Septic shock
